DETAILED ACTION

Board reversed the rejection of claims 1, 2, 5-8, 10, 12, 13 and 17-29 and affirmed the rejection of claim 30. Therefore, claims 1, 2, 5-8, 10, 12, 13 and 17-29 are now allowed and claim 30 is cancelled.

Allowable Subject Matter

Claims 1, 2, 5-8, 10, 12, 13 and 17-29 are allowed.

The following is an examiner's statement of reasons for allowance:

The invention is directed to a system adapted for use to exchange vehicular data relating to vehicle without the use of database. The independent claims 1, 23 and 28, recite computer terminals operative to transmit to each other and receive from one another both vehicular characteristics data and vehicular financial data and a processor for controlling the data. The closest prior art, Giovannoli (US 5,758,328), teaches buyers and sellers terminals for processing requests for quotation for goods and services through a central processing unit. Giovannoli teaches computer terminals operative to transmit to each other and receive from one another both product or service characteristics data and financial data and a processor for controlling the data. Giovannoli does not explicitly teach transmitting vehicular characteristics and vehicular financial data. Berent (US 5,774,873) teaches entering vehicular characteristics data and vehicular financial data however, uses a database to store the data. Thus, an artisan in the art would not have been motivated to combine the teaching of Giovannoli and Berent, as stated by the BPAI. (See paper #25, for decision of the Board of Patent Appeals and Interferences).

Claim 12, recites computer terminals operative to transmit to each other and receive from one another the vehicular data for display on respective display devices, inputting vehicular data

Art Unit: 3622

units of a vehicle at any time into a data inquiring computer terminal for display, processing the data units immediately after inputting the data units by transmitting the data units to the data responsive computer terminals for display and inputting vehicular financial data units into at least one of the responsive computer terminals for display on its display device in response to the vehicular characteristics data received by the data responsive computer terminals. Giovannoli teaches sending a request for quotation to a quotation network computer, the request then routed to specific vendors, and vendors responding to the request for quotation. Bernet teaches inputting vehicular characteristic and financial data. As stated by the BPAI, "the limitation "inputting the vehicular financial data units into at least one of the data responsive computer terminals for display on its display device in response to the vehicular characteristics data received by data responsive computer terminals" is not met by Giovannoli and Bernet because in the prior art, the financial data is not inputted into the computer terminal for display in response to the vehicular characteristics data being received by the data response computer terminal, as the data is obtained by the quotation system in the buyer's computer interrogating the vendor's product database to retrieve pricing information". Therefore, the prior art, either singularly or in combination, fail to anticipate or render the above stated limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
